

Interview Task: Netflix Web App Prototype

Objective:

Create a **Netflix web application** that displays a mock of nine movies with an interactive hover and playback experience.

- Responsive on desktop and mobile
 - It doesn't have to be the same layout you are free to apply maximum creativity and flexibility
-

Interactions:

Hovering on a movie:

- Plays the **movie preview** in the background.
- Only hovered movie plays at a time in the background.

Clicking on a movie:

- Hide main page and play the movie video.
- A small, **transparent button** appears on the **top-left** corner should appear when we move the mouse.

Clicking the Back button:

- Returns to the **Netflix main page**
 - Stops the full-screen playback
 - And again, if we hover over the movie should play on the background
-

Stream Simulation:

- Video can be a **sample video link** (e.g., .mp4, .m3u8, or udp:// placeholder)
 - Playback should simulate real stream behaviour.
 - Suggested player: WebXPlayer / VLC.js
-

For Frontend Stack (Required):

- Framework: **React.js** or **Next.js**
 - UI: **Tailwind CSS**, **MUI**, or **Bootstrap**
 - State Management: **Context API**, **Redux**, or **Zustand**
-
